

REBATES GET YOU FREE MONEY FOR SAVING ENERGY!

To qualify for a rebate, be sure to call the utility companies and double check the requirements before paying for energy upgrades.

For example, if you need two types of insulation installed, you may only qualify once for the rebate (one insulation rebate per address). Also, if you have oil heat, you may only qualify for a rebate if you start with the free utility program audit from NSTAR. This table was updated in July 2009, please call to ensure that the information below is still correct.

The focus of the Kyoto Project is quality control. Two tests -- the **blower door** and **infrared camera test** -- will evaluate the effectiveness of any work you have done on your home and are not offered by the free utility program audit. You can use the rebates & tax credits below to finance these two independent tests, which cost approximately \$200-400 total. We are collecting data to analyze the quality and effectiveness of weatherization done by

homeowners and contractors in the Newton area. You can assist by sharing the data from your home! For details about this and other weatherization options, contact the Green Decade at 617-965-1995 or go to www.greendecade.org.

Rebates	Insulation Materials	Furnace/Boiler	Water Heater	Programmable Thermostat	Energy Star Window	Deadline	Contact
